DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Willits et al. (United States Patent No. 5,364,269).

Willits et al disclose a partial denture in the form of an arch comprising at least one denture tooth 18 on one side of the arch held by a resin material 12,14,16. The resin is supported by a metal framework of a metal casting comprising a linguoplate 30. The linguoplate comprises a lingual portion having a shape conformable to the shape of the lingual surface of teeth and alveolar mucosa from a tooth adjacent the missing tooth to another side of the dental arch of the patient for intimately contacting the lingual surface of the teeth and the alveolar mucosa. A tissue portion extends from the lingual portion and has a shape conforming to the shape of the portion of the rear gum tissue connecting to the teeth and the alveolar mucosa so that there is no gap between the teeth and the portion of the gum tissue not covered by the linguoplate (see figure 4). The metal casting further includes rests 34 provided on the lingual portion for engaging the teeth. Willits et al disclose the invention essentially as claimed except for the tissue portion having a margin 3-10 mm away from the lingual portion. It would have been obvious to one having ordinary skill in the art at the time the invention was made to create the margin of the tissue

portion 3-10 mm away from the lingual portion, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233. Regarding claim 7, rests 34 also constitute "clasps for engaging with one or more teeth of said patient" (see col.2, lines 4-15).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
